ORAGROL GLOBAL.

PROTECTION AND AUTOMATION, RUN AS ONE SERVICE FOR CANADIAN BUSINESS

This catalogue explains what ORAGROL GLOBAL does, who it is for and how an engagement works.

Inside: the three ways to start, the services behind them, and what you see every month once we are working together.

Written for owners and managers of Canadian businesses.

2026 / 2027 EDITION

The first step

FIVE VENDORS. NO OWNER.

A growing business runs on a dozen tools and a handful of providers. Each one looks after its own piece. Nobody looks after the gaps between them, and that is where most problems start.

WHAT FIXES IT

One named owner for security, access and change, with the vendors reporting to them instead of to whoever answers the phone.

IT IS NOT A TECHNOLOGY PROBLEM. IT IS AN OWNERSHIP PROBLEM.

Take a typical week. The IT company patches the laptops it manages. The email provider filters spam by its own rules. The accounting software holds payroll and the bank feeds. The website agency keeps the forms working. Each of them does its job, and each would say so honestly.

The problem is what sits between them. A new hire needs an email address, a laptop, a payroll login and access to the shared drive. That is four vendors and four tickets, and someone has to remember all four. When that person leaves, the list has to run in reverse, and the item that gets missed is usually the one that mattered.

Security is the worst case. An alert from the endpoint tool goes to an inbox only the IT contact checks, on a Tuesday, after lunch. The firewall vendor sends its monthly report to someone who left last year. Nobody has decided who acts on it, so the default is that nobody does.

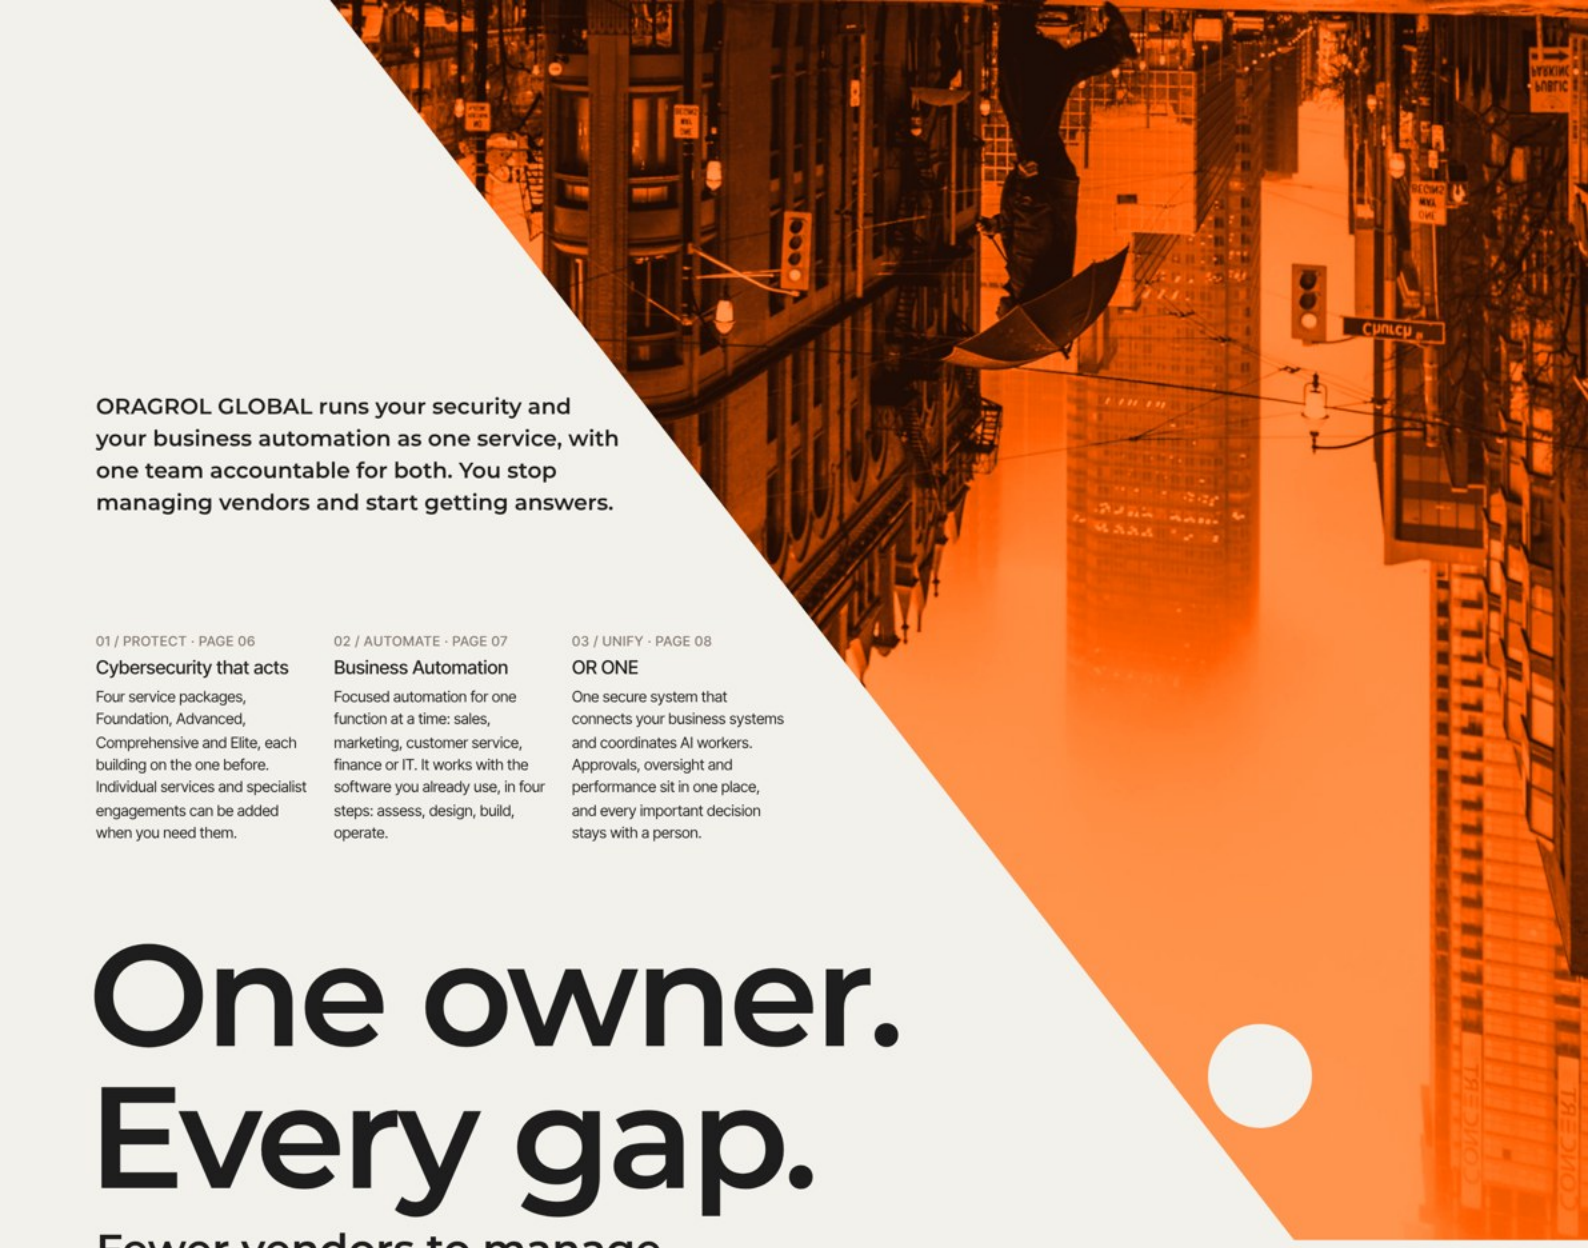

Most of these businesses are not careless. They are busy, and each tool was bought to solve one problem. The gaps open slowly. By the time someone notices, the cost has already landed on a client invoice or a lost week of work.

WHERE IT BREAKS

1 Alerts nobody reads
Warnings land in an inbox no one checks, or in a tool no one logs into.

2 Manual work that leaks
Invoices, new staff, passwords and access are handled by hand, over email and in spreadsheets.

3 No clear answer
Ask “are we safe right now?” and it takes three phone calls.

ORAGROL GLOBAL runs your security and your business automation as one service, with one team accountable for both. You stop managing vendors and start getting answers.

01 / PROTECT · PAGE 06

Cybersecurity that acts

Four service packages, Foundation, Advanced, Comprehensive and Elite, each building on the one before. Individual services and specialist engagements can be added when you need them.

02 / AUTOMATE · PAGE 07

Business Automation

Focused automation for one function at a time: sales, marketing, customer service, finance or IT. It works with the software you already use, in four steps: assess, design, build, operate.

03 / UNIFY · PAGE 08

OR ONE

One secure system that connects your business systems and coordinates AI workers. Approvals, oversight and performance sit in one place, and every important decision stays with a person.

One owner. Every gap.

Fewer vendors to manage.
One answer when it matters.

Most businesses buy protection from one provider and efficiency from another, then spend their own time joining the two together. ORAGROL was built the other way round. The same team that protects your devices, email and logins also builds the workflows behind your sales follow-up, finance admin and routine IT. When something changes in one, it is handled in the other.

That changes what you see. Instead of reports from five places, you get one view of where the business stands, in plain language. When a question comes up, there is one number to call, and the person who answers already knows your setup.

OWNERSHIP

EVERY SIDE OF THE TABLE

Mohammad Chelouy Tabrizi has spent more than twenty years in sales and marketing. He is also a working developer, a former university lecturer in management and economics, and the founder of two cybersecurity companies he ran from abroad.

In 2025 he brought all four together in Ontario. ORAGROL GLOBAL is built on what that mix taught him: buyers need clarity, systems need owners, and security only works when one person is accountable for it.

>
> **IF A CLIENT HAS TO CHASE US TO FIND OUT WHETHER THEY’RE SAFE, WE’VE ALREADY FAILED.**

FOUR LEVELS.

01 / START HERE — BASE LEVEL

FOUNDATION

Establish your core protection.

02 / SEE MORE — + FOUNDATION

ADVANCED

Extend visibility and strengthen access.

03 / CONNECT IT — + ADVANCED

COMPREHENSIVE

Connect protection across your environment.

04 / FULL COVER — + COMPREHENSIVE

ELITE

Bring protection and response together.

PHOTO · **READING THE WHOLE PICTURE**

Each package includes everything in the one before it. Start where the business is today and step up when it grows.

ADD WHAT YOU NEED

Individual services can be added to any package, one at a time, without moving up a level.

SPECIALIST WORK

Penetration testing, compliance readiness and forensic incident response are available as separate engagements.

PREVENT. WATCH. ACT.

01 / BEFORE ANYTHING HAPPENS

CLOSE THE DOORS

We set up the policies, access rules and protections that close the obvious doors first.

02 / EVERY DAY

SEE IT EARLY

We monitor activity and review weak spots and exposure, so changes are seen while they are still small.

03 / WHEN IT MATTERS

FIX IT WITH YOU

We respond within the permissions you agree. Routine fixes follow pre-approved settings. Sensitive changes come to you first.

DETECTION ALONE IS NOT A FIX.

SPECIALIST ENGAGEMENTS · **SCOPED SEPARATELY**

Penetration Testing
How weaknesses could be exploited, with evidence.

SOC 2 Type II
Readiness and evidence for the audit.

PCI-DSS QSA Assessment
Card-payment environment, assessed by a QSA.

Forensic IR
Investigation, timeline and reviewed report.

ADD TO ANY PACKAGE · **12 INDIVIDUAL SERVICES**

LEADERSHIP

- Virtual CISO
- Data Privacy Management
- AI Governance & Risk Management

AI SECURITY

- AI Model Security
- AI Data Security & Privacy
- AI Security Assessment
- AI Threat Detection & Protection

ACCESS & CLOUD

- Zero Trust Access Security
- Privileged Access Management
- Cloud Network Security

SOFTWARE

- Secure Software Development
- Application Security Testing

ONE JOB AT A TIME.

PICK ONE FUNCTION · **START THERE**

01 **SALES**
Follow-ups and pipeline admin that no longer slip.

02 **MARKETING**
The routine steps behind campaigns and content.

03 **CUSTOMER SERVICE**
Faster first replies to the questions you get every day.

04 **FINANCE**
Repetitive admin such as invoices and matching records.

05 **IT**
Routine requests, new accounts and access changes.

IT WORKS WITH THE SOFTWARE YOU ALREADY USE.

No new platform to learn. We automate inside the tools your team opens every morning, one function first, then the next.

HOW IT RUNS · **FOUR STEPS**

01
ASSESS
We map one function and find the work worth automating.

02
DESIGN
We agree what it will do and what stays with your team.

03
BUILD
We build it on your existing tools and test it with your people.

04
OPERATE
We run it, watch it and adjust it as the business changes.

One system for how the whole business runs.

Built around one company. Yours.

OR ONE

10
Business areas it can connect

03
Levels of decision

Most businesses already have the tools. What they lack is one place where the work between those tools is run, checked and owned.

TYPICAL SCENARIO

A lead arrives through the website. Someone copies it into the CRM, someone else sends the quote, and finance chases the invoice a month later. Every step lives in a different tool and relies on someone remembering.

OR ONE joins those steps into one secure system. It connects the software you already use, and AI workers take on the routine parts: gathering information, preparing reports, drafting the next message and keeping records up to date.

Business areas

- Sales
- Marketing & Branding
- Finance & Accounting
- HR & People
- Customer Service
- Operations & Admin
- IT & Technology
- Procurement & Vendor
- Legal & Compliance
- Leadership & Strategy

Who decides what

Runs on its own

Research, reporting and reversible admin, inside the access and rules you approve.

Waits for review

Customer messages, draft invoices and operational updates pass a person first.

Needs your sign-off

Payments, payroll, hiring and security changes need explicit approval. Choosing a capability never grants that authority.

Every important decision stays with a person.

What it does not do is decide for you. Before anything is built, we agree which work can run on its own, which waits for a review, and which needs your explicit sign-off. Payments, payroll, hiring and security changes always sit in that last group.

Start small, with one workflow in one area such as sales follow-up, and add more once it has earned your trust. Each workflow is tested with your team on real scenarios, exceptions included, before it goes live. After launch it is monitored and supported, and you see the work, the approvals and the results in one place.

How it is built

01
Define scope

02
Build & connect

03
Test & approve

04
Launch & maintain

See it clearly. Then act as one.

01 **Understand**
Look at how the business really runs before choosing any technology.

02 **Prioritize**
Decide what matters most, and in what order.

03 **Protect**
Close the gaps that carry the most risk first.

04 **Automate**
Take routine work off your team, one function at a time.

05 **Evolve**
Review, adjust and add more as the business grows.

Know where you stand before you spend.

START WITH CLARITY

Most businesses only find out how exposed they are after something has gone wrong. The Cyber Health Score turns that around. It is a short guided assessment of how your business handles the basics: devices, email, access, backups and the people who look after them.

Your answers are scored out of 100. You also receive a written report by email that explains the score in plain language, shows where you are strongest and weakest, and sets out the priorities to deal with first.

It costs nothing, and you are under no obligation. If you decide to work with us, the report becomes the starting point, so the first conversation is about your business, not a sales pitch.

WHAT IT LOOKS AT

- Devices and updates
- Email and phishing protection
- Logins and access
- Backups and recovery
- Who looks after what

WHAT HAPPENS NEXT

01 Answer the guided questions online.

02 Receive your score and written report by email.

03 Talk it through with us, only if you want to.

Free to take. No obligation.

TYPICAL SCENARIO · PROFESSIONAL SERVICES

An accounting or bookkeeping firm holds its clients' tax, payroll and banking data, and can often move client money. That makes it a high-value target, even with a team of ten.

The usual attack is quiet. An email that looks like it comes from a client asks to change their banking details. A stolen login opens both the inbox and the cloud accounting platform. A staff laptop at home has no one checking it.

What helps: two-step login on email and accounting accounts, a call-back check on every payment-detail change, automation for follow-up and billing, and OR ONE to connect intake, billing, staff capacity and client communication in one place.

Start with a con-ver-sa-tion.

Whether you have one urgent priority or want to rethink how the whole business runs, the first step is the same: a clear conversation about how you operate today.

There is no sales script. We listen first, then tell you plainly what we would do, and what we would not.

THREE WAYS IN

01 **Free Scan**
A quick, no-cost first look at where you stand.

02 **Cyber Health Score**
A score out of 100 and a written report with your next priorities.

03 **Talk to us**
Send an enquiry and choose email or a video call, at a time that suits you.

Every qualified enquiry is answered within two business days.
